

High Mast Lighting Pole, 300W LED FloodLight

High Mast Lighting is a large pole with multiple light fixtures that they can be mounted on a single site east
while the lighting fixture is not as bulky as a street light. Most of the poles are 100 feet high with some reaching 150 feet. The
poles are spaced 100 feet apart and are located in the center of the intersection. The poles are designed to provide uniform lighting in the
intersection and to reduce light pollution.
