Australia bushfires

The Australian wildfires, which began in September last year and have been ongoing for five months, are still at stake.

The worst forest fires, that hit southern and eastern Australia have lost 6.3 million hectares of forest, or 28 percent of forest's total area, and more than 2,500 buildings, including 1,300 homes, were burned.

Australian ecologists estimate that the wildfires killed nearly 500 million wild animals, including mammals, reptiles and birds.

In particular, koalas, which have not been avoided in a timely manner due to over 80% of habitat destruction and slow actions, are actually becoming functionally extinct.

Photos on local SKS show that Australia is covered with bloody red skies.

Forest fires have not been evaded and continue to fill the sky.

Australian wildfires are experiencing a torrids of flame with the addition of high temperatures and strong winds. The government expects the wildfires to face the worst of the weekend.

LED Flood lighting 80W

Public procurement NO:23327115
LED flood lighting 80W
