

News Letter_Apr.2020_Monthly News letter

Korea has more than 10,000 confirmed cases of COVID-19 (April 2020). However, the aftermath of infection is gradually decreasing, and COVID-19 response has been spotlighted by several countries.

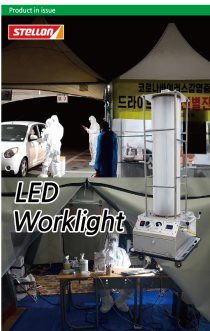

Korea's response to COVID-19 quickly prevented new infections through early isolation and medical prescription of confirmed patients through a collective screening of 196,000 people. And through the mobile phone app, the movement of the confirmed person was identified.

Unlike other countries, Korea does not block the movement of citizens and seeks to limit and save the life of COVID-19 through self-isolation, large-scale assembly and voluntary distance.

The reason why Korea is so well controlled by COVID-19 is honesty, community awareness, and excellent medical technology.

Korea has a special center to prevent COVID-19 infection. 572 establishments nationwide have been installed to detect and examine suspicious patients. And even at night, work continues. Two doctors are counseling patients and collecting samples from the screening clinic from 7 pm to 10 pm or 12 pm.

LED 170W cylindrical lighting suitable for indoor work lighting

■ Product Features

01. Indoor work lighting

Rich and pure (Deep red) light
- 6500K (Daylight) 1000lx
- 4000K (Warm white) 1000lx

02. Connectable

220V
- 220V Connecting products to cable
- Up to 10 connections

03. Portability

Light weight setting
- Cable length 10m when using outlet (cable & stand)
- 10m

04. Able to separate

Removable top and bottom of product

■ Specifications

LED	Beam angle	CM	CCT	Quantity
1x180W	90°	0x69-80	5,300K	10P-10P

Power	Input voltage	Max. temperature	Cable length	Material	Weight
170W	AC 100-240V	2,500 x 30	10m	Aluminum	5.0kg (without stand)

■ Battery Specifications

Kind	Volume	Operating time	Charging time
Lithium	3000mAh	5-10 hours	2-3 hours

■ Product dimensions (1030mmx450mmx310mm)

Front, Side, Back views showing dimensions.

Grasshoppers, boasting a voracious appetite that is devastating to the extent that there is no grass around them, are moving from Africa to India and Pakistan to mainland China.

One of the most destructive pests on the planet the grasshopper is 6 to 7 cm long and weighs 2 g. It lays 300 eggs a year and breeds grasshoppers over 5 generations. This time, there are 400 billion grasshoppers.

It is the first time in 70 years that an astronomical number of locusts has appeared, and experts believe that locusts have risen due to abnormal weather.

China is preparing for a war with locusts, and in Las Vegas a huge amount of locusts is appearing to surprise tourists. Experts say that a hotel's lighting attracted a swarm of grasshoppers in search of food.

Propose lighting using the propensity of grasshoppers strongly attracted by UV rays
